

Observation in Tropical Western Pacific

- PALAU field experiment in early summer season (May to July) of 2005, 2008, 2010, and 2013.
- Using ground-based and ship-borne Doppler radars, upper-air sounding arrays, oceanic buoys, etc.
- Target of PALAU:
 - Tropical western Pacific atmospheric disturbances and their influence to other phenomena
 - Tropical cyclone
 - Northward propagating ISV
 - Monsoon trough
 - Easterly waves
