

Observations

Focused on Data Exchange

- 1) Having one stop site to obtain all YMC data information is useful*.
* .. YMC web sites in BMKG & JAMSTEC will provide them.
Currently, temporal version is provided. DYNAMO web site is a good example.
- 2) However, some data sources may not be able to provide data directly to the data centers. Instead, their site can be linked from YMC Data Archive Centers (keep “one stop” idea). Point of Contact is a minimum requirement.
- 3) Although MC Met agencies basically agree to provide data, more formal procedures are needed to get final approval. Moreover, more exact information about data requirement should be stated based on the YMC sciences. (ex. “surface met” is too obscure.)
- 4) More interaction between MC agencies and scientists is mandatory to obtain win-win relationship.
